NEW JAPANESE GIANT MORNING GLORY.

The handsomest and most interesting race of climbers ever introduced. They are very rapid growers, attaining a height of 30 feet during the summer, and are specially attractive from the first, on account of the great variety of color and marking in the foliage; some of the leaves being a dark green while others are golden, and many of them marbled, mottled, margined and streaked with silvery white, green and gray. But the greatest charm of these new climbers is in their flowers, which are of gigantic size, and in an almost unlimited variety of colors, from purest white through all the different shades of pink, rose, red, carmine, crimson, blue, royal purple and maroon, most of them with throats of one color and margins of another, while others are striped, spotted and splashed in an endless variety of styles. They are of the easiest culture. Sow early in a warm, sunny place, or to gain time start the seeds in the house. Choice Mixed, 3 pkts. 25c.10

IPOMEA.

Tender annuals of rapid growth, with beautiful and varied flowers; for covering old walls, trellises, arbors or stumps of trees, they are invaluable.

Grandiflora. (Moonflower). One of the most showy of the annual climbers. A rapid growing vine, easily reaching a height of 25 to 30 feet during the season. At night and during dull days the plants are covered with large, pure white fragrant flowers, 5 to 6 inches in diameter10

Heavenly Blue. Flowers 4 to 5 inches across, in large clusters, in such abundance as to nearly hide the foliage; color a beautiful sky blue10

HOLLYHOCK.

One of our grandest Summer and Autumn flowering plants. For a background to a flower garden, perhaps no plant is so useful.

New Mammoth Fringed Hollyhock "Allegheny." The flowers of this grand new variety are from 4 to 6 inches across, ranging from semi-double to double and are so finely fringed and curled, that one would hardly class them with the old Hollyhock family, except for the similarity in habit of the plants. The colors are shell pink, rose, and ruby red, a shade or two deeper at the center and exquisitely tinted toward the edge. The flowers do not rot on the stalk as do the other varieties, but drop as soon as they fade, and every bud to the top of the stem develops into a flower, making the blooming season considerably longer, which is from June until frost. 15

NEW AND CHOICE VARIETIES.

PRESIDENT CLEVELAND.

President Cleveland. There was no variety in our Canna field the past season that attracted as much attention as did President Cleveland. It was a mass of bloom from very early in the summer until cut down by frost, and the flowers were such a brilliant scarlet that they seemed to flash out beyond any other variety. The flower spikes are of enormous size, while the individual flower has broad thick petals, making a lasting, well-shaped bloom. It is a strong, vigorous grower, 3 to 4 feet high. Certainly the finest orange scarlet to date. 20c. each; 3 for 50c.

Duke of Marlborough. The darkest Canna known, a beautiful crimson maroon. This is a sturdy, erect grower, fine metallic green foliage. You need this to make your collection complete, it is entirely distinct from all others. 25c. each; 3 for 60c.

Duchess of Marlborough. A pure pink variety, very attractive and beautiful; has fine large flowers four inches and over across. This is a new shade in Cannas. Plant is a strong, robust grower, 4 to 5 feet. 25c. each; 3 for 60c.

Blooms in large, even trusses, carried well above the foliage, and the flower spikes are produced evenly on the plant, making a shapely, compact plant. The plant is dwarf in habit, growing but 2½ to 3 feet even in rich soil; foliage rich green with chocolate margin. This is one of the earliest flowering Cannas, valuable either for bedding or pot culture. 25c. each; 3 for 60c.

Surprise. A gem among Cannas; plant very dwarf, rarely growing over two feet high, of compact habit, throwing up numerous branching flower stalks. While the plant is very dwarf the flowers are of the largest size, of nice rounded form, similar to a Gladiolus in shape. Bright crimson scarlet, distinctly and evenly bordered deep golden yellow. As a pot plant it has no equal among Cannas, blooming freely in small pots when not over 12 to 15 inches high. Its dwarf habit and free flowering qualities make it a valuable addition to our list of bedding Cannas, 25c. each; 3 for 60c.

Defender. An excellent new variety, possessing some very striking qualities. The coloring is bright clear yellow, heavily spotted scarlet forming a combination

equalled by no other Canna. Height, 3 to 3½ feet. An early, very profuse bloomer, producing large, even heads of broad petaled flowers. Sure to become a popular variety, as it stands sun and storm well. 20c. each; 3 for 50c.

Very free flowering, has large spikes of flowers raised just enough above the foliage to give the plant a compact, shapely appearance. 35c.

Yellow Crozy. Stands strong sunshine and rain much better than many of the yellow sorts and is so dwarf and free flowering that it will become almost indispensable for masses, as it can be used with good effect as a border to beds or clumps of taller growing varieties, 25c. each, 3 for 60c.

Of vigorous growth, yet short jointed and compact, it takes a place in the front rank of hardy garden roses; color pure red, shading to crimson and maroon at the base of petal, forming a coloring equalled by that of no other rose. The buds are long, held up by long, stout flower stems, making it valuable for cut flowers. 35c.

HYBRID WICHURIANA ROSES.

Of the many new forms of roses introduced in recent years, there are none more noteworthy than these Hybrids of Wichuriana. They retain many of the characteristics of their parent; the thick, shiny foliage and vigorous, trailing habit of growth being most noticeable. They are even stronger growing than the common Wichuriana, making shoots from 15 to 20 feet long in a season on the poorest soil. Wherever a strong, rapid growing vine is desired for covering embankments, terraces, trellises or pillars, they may be used with beautiful effect.

Universal Favorite. A vigorous grower, with long branching shoots that are covered with dense bright green shining foliage. The flowers are double, 2 inches and over in diameter, of a beautiful rose color, similar to Bridesmaid; very fragrant.

South Orange Perfection. Similar to the preceding in growth. Remarkably free flowering; when in bloom is a mass of the most perfectly formed double flowers, about 1½ inches in diameter; soft blush pink at the tips, changing to white.

Pink Roamer. A hybrid of the sweet briar, which it somewhat resembles in character of bloom, while the growth, which is very rampant, partakes more of the Wichuriana type. The single flowers are over 2 inches in diameter, a bright, rich pink with large, silvery white center and orange red stamens, producing a charming effect; delightfully fragrant.

Manda's Triumph. This is a grand variety. The flowers, which are pure white and very double, are produced in clusters of from 10 to 12 on each cluster on small side shoots, literally covering the plant and standing well above the foliage.

THE THREE RAMBLERS—CRIMSON, WHITE AND YELLOW.

A trio of beautiful, hardy climbing Roses. The introduction of these new Ramblers furnishes us with new colors for the decoration of porches and pillars in the north.

We have for years had plenty of crimson and yellow climbing Roses in the tender class, but none that are hardy where the mercury falls more than 10 to 12 degrees below the freezing point. With the Ramblers we may have these much desired colors anywhere in the north. They are all remarkably free bloomers, being literally covered with fine large clusters of flowers that remain fresh and bright for an unusual length of time.

Crimson Rambler. Wherever seen during the past summer it has been a mass of rich, glowing crimson, and everyone who has it is delighted with it. Perfectly hardy; wonderfully free flowering; intensely bright and vivid in color. The plant is a strong, rampant grower, making shoots 10 to 12 feet long in a season when well established. The

flowers are produced in large trusses pyramidal in shape, often 35 to 40 in a cluster, fairly covering the plant from the ground to the top with a mass of bright, glowing crimson. The color is simply superb, and is retained unfaded, or without showing any of the purplish tinge so often seen in dark roses, for an unusual length of time. For walls, pillars and porches, or any other place where a hardy climbing rose is wanted, nothing can be more desirable or beautiful. As many as 300 blooms have been counted on a single branch. 15c; 4 for 50c. Large plants 40 cents.

Yellow Rambler. (Aglia.) The only yellow hardy climbing rose. It has been thoroughly tested and found to successfully withstand without protection a continued temperature of zero and below. It is similar to Crimson Rambler in manner of blooming, the flowers being in immense clusters and having the same lasting qualities, remaining in bloom three to four weeks. 15c; 4 for 50c. Large plants, 40c.

White Rambler. (Thalia.) In habit of growth, foliage, manner of blooming and shape of flower this is identical with C. Rambler, differing only in color, which in Thalia is pure, clear white. 15c; 4 for 50c. Large plants 50c.

One each of the 3 Ramblers 40c.
Large 2 year plants \$1.00.

ROSA RUGOSA—JAPAN ROSE.

Forms a sturdy bush 4 to 5 feet high, covered with large, dark green, glossy foliage, crowned with terminal clusters of ten to twenty flowers, three inches in diameter. Perfectly hardy. A valuable plant for the hardy border or shrubberies, its large, handsome scarlet fruit being very ornamental all through the Autumn and early Winter months.

Rugosa Alba. Pure white, 15c.

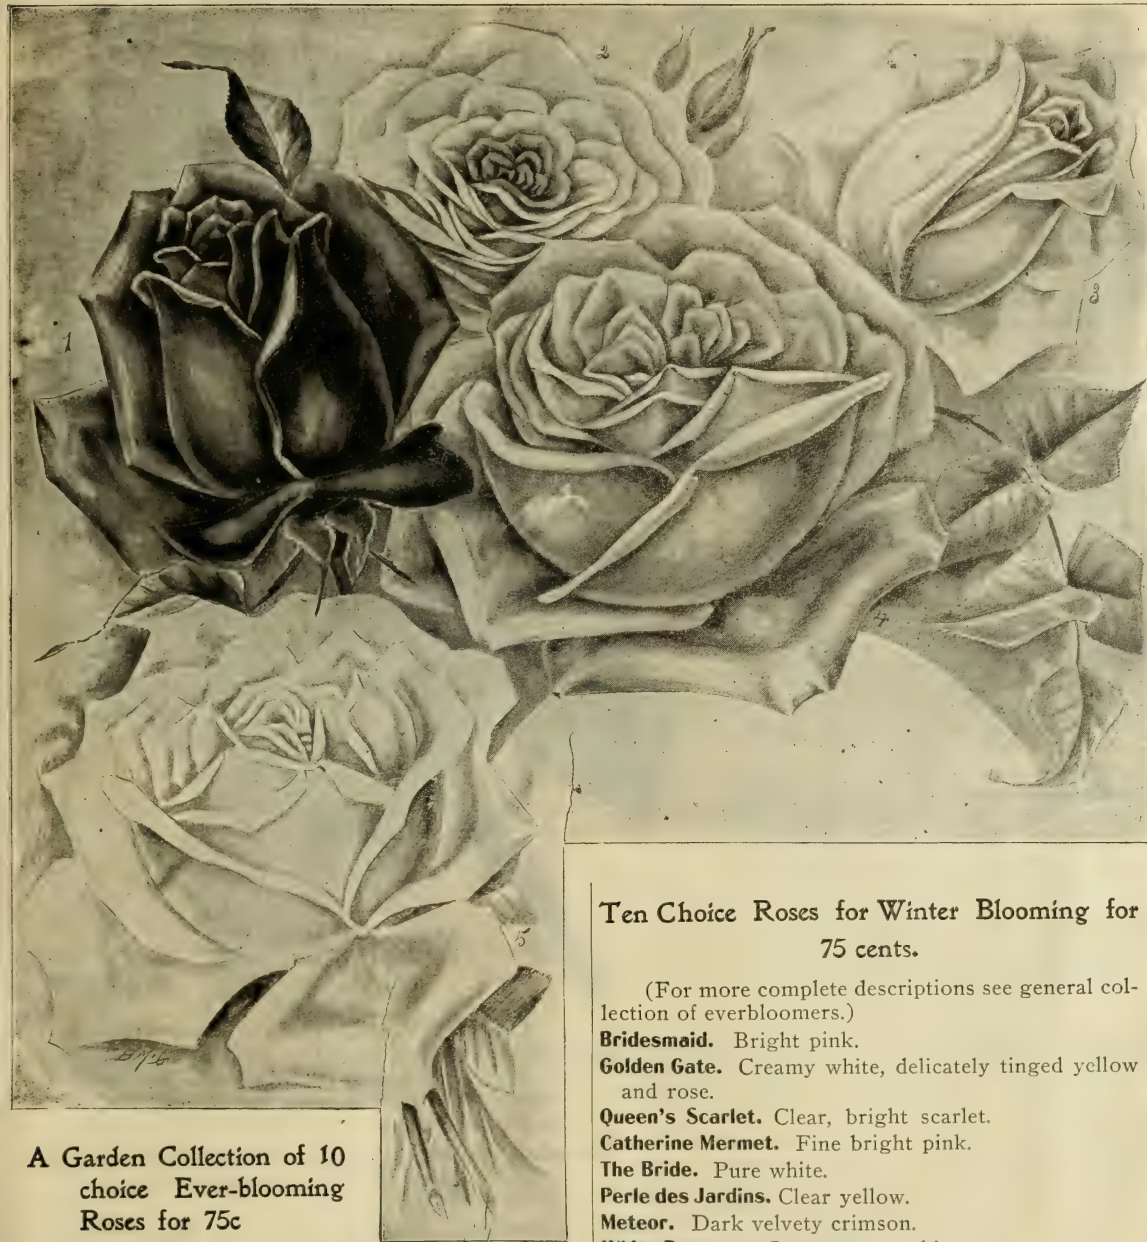

Rugosa Rubra. Deep rose, 15c.

PERSIAN YELLOW.

The blossoms of those marked with (p) are destitute of stamens, and are termed pistillate, and unless a row of perfect flowering variety is planted at intervals not exceeding about a rod, they will produce imperfect fruit and but little of it; but when properly fertilized as a rule, they are more prolific than those with perfect flowers. Our land is especially suited to the development of strawberry plants, giving us extra fine crowns and roots, our plants weighing two to three times as much as many sent out. Our stocks are pure, each kind kept by itself and cultivated entirely for the production of plants. They are carefully graded, handled and packed; certain to give the best of satisfaction.

A vigorous grower; healthy and hardy, the most productive, one of the sweetest and best in quality; continues longest in profitable bearing, retains its foliage, hangs on bush in good condition the longest, comes into bearing early, is easily and cheaply picked. Holds an unparalleled record for actual acreage yield in ordinary field culture for over eighteen years, only one crop failure in that time. Has averaged over \$450 per acre for four consecutive years on 6½ acres. 20c; 12 for \$2.00; 100 for \$11.00.

Raby Castle. An old English variety; resembles Victoria. Bunch long and large, bright red; very prolific; carries its foliage and fruit very late.

Red Dutch. An old well-known sort, good quality; berry medium, long bunch; very productive.

Victoria. Large, bright red; bunches extremely long; berries medium size, of excellent quality. Good, erect grower; very productive. Ripens late.

Wilder. One of the strongest growers and most productive. Bunch and berries very large, bright, attractive red color, even when dead ripe; hangs on bushes in fine condition for handling as late as any known variety. Compared with the celebrated Fays, is equal in size, with longer bunch, better in quality, with much less acidity; ripens at same time, continues on bush much longer; fully as prolific, in some trials largely outyielding it. 20c; 6 for \$1.00.

White Dutch. An old, well-known variety; of medium size and excellent quality.

White Grape. Very large; yellowish white; sweet or very mild acid; excellent quality and valuable for the table. Productive.

EXCEPT NOTED, 1 YEAR, 10 CTS. EACH; \$1 FOR 15, \$3.50 FOR 100.

For price by freight or express, see price list.

GOOSEBERRIES. ENGLISH VARIETIES.

Lancashire Lad. One of the largest and best of the English varieties. Fruit smooth, bright red, extra size, fine quality; one of the best dessert berries. Bush strong grower and productive.

Crown Bob. Large, roundish oval, red, hairy, of first quality.

Industry. Largest size, excellent flavor, pleasant and rich, dark red color when fully ripe. Strong upright grower, immense cropper, less subject to mildew than most of the foreign varieties. The best known and most successful English sort.

Keepsake. Fruit very large, straw-colored, of excellent flavor, carries well to market. Bloom is well protected by early foliage, making it one of the surest croppers. On our grounds this season three-year bushes of Keepsake were loaded with extra large, fine specimens of good quality. Believe it one of the best English sorts for our climate.

Whitesmith. Large, roundish oval, yellowish white, slightly downy; of first quality.

**EXTRA STRONG TWO-YEAR PLANTS 25c. EACH;
\$1.00 FOR 5.**

AMERICAN VARIETIES.

Chautauqua. Combines size, beauty and quality with vigorous growth and productiveness. Fruit large, light yellow, free from spines and hairs; averaging 1 inch to 1¼ inches in diameter. Thick skinned, sweet and of exquisite flavor. 1 year, 25c; 2 years, 40c.

Smith's. Large, pale, greenish yellow; skin thin, of excellent quality, being unsurpassed by any other variety for table use and cooking; bush moderately vigorous and excessively productive. 15c; 10 for \$1.00.

Houghton's. Small to medium; roundish oval; pale red; sweet, tender, very good; plants spreading; shoots slender; enormously productive. 10c; 12 for 75c.

Columbus. Fruit of largest size; oval, handsome greenish yellow; finest quality. Plant a strong, robust grower, so far free from mildew; foliage large and glossy. One of the best for general cultivation. 25c; 5 for \$1.00.

Downing. One of the oldest and best known sorts. Large, handsome; pale green, of splendid quality for both cooking and table use; bush a vigorous grower and usually free from mildew. One of the best for home use and market. 10c; 12 for \$1.

Red Jacket. An American seedling of large size; smooth, prolific and hardy, of best quality. Has been well tested over a wide extent of territory by the side of all the leading varieties, and so far the freest from mildew, both in leaf and fruit, of them all. A wonderful cropper, with bright, clean, healthy foliage. 1 year, 20c; 2 years, 25c.

ASPARAGUS.

Conover's Colossal. A mammoth variety of vigorous growth, sending up from 15 to 20 sprouts each year, from 1 to 2 inches in diameter; color deep green, and crown very close. One year roots, 50 for 65c; 100 for \$1.00.

Palmetto. A very early variety; even, regular size, of excellent quality. One year, 50 for 65c; 100 for \$1.00.

Columbian Mammoth White. It produces shoots which are white and remain so as long as fit for use. In addition to the marvelous advantage of its white color, the Columbian Mammoth White Asparagus is even more robust and vigorous in habit, and throws larger shoots and fully as many of them, as the Conover's Colossal. Market gardeners, growers for canners and amateurs, should give this great acquisition a thorough trial. 50 for 75c; 100 for \$1.25.

RHUBARB OR PIE PLANT.

This deserves to be ranked among the best early fruits in the garden. It affords the earliest material for pies and tarts; continues long in use and is valuable for canning. Make the border very rich and deep.

Linnæus. Large, early, tender and fine. 15c; 8 for \$1.00.

HORSE RADISH.

TWELVE HUNDRED ACRES DEVOTED TO THE NURSERY BUSINESS.

In filling orders from this list we reserve the right, in case that we are out of a variety, to substitute another of equal merit when it can be done (always labeling with correct name), unless the party ordering says "no substituting," in which case we will fill the order so far as we can and return the balance.
